

Abstract:

Name: Volleyball player performance applied to overthrows in match

Objectives: Men's national team valuation of selected individual skills depending on course in particular matches at European Championship 2005.

Methodics: Head basis was watching videos of all men's national team matches in basic pool at European Championship 2005. To determine rate of success we used four-level scale connecting with situation, in which were participated selected specialized players: spikers, blockers and diagonal players, until one team gains a point. For watching we used videos from Men's European Championship 2005.

Issues: After valuation we concluded that rate of success in individual skills is not directly connected with point variation.

Key words: volleyball, serve, offensive stroke, block, spiker, blocker, diagonal player, performance, player, team, rate of success
